

GARDEN BATHTUB

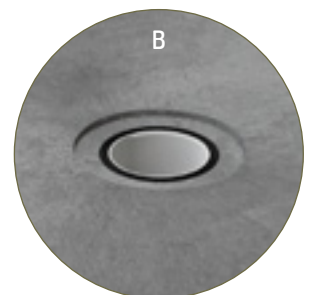

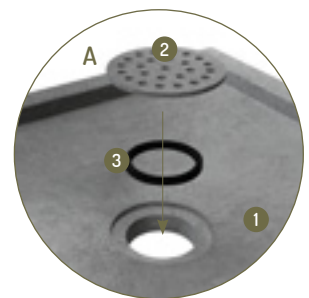

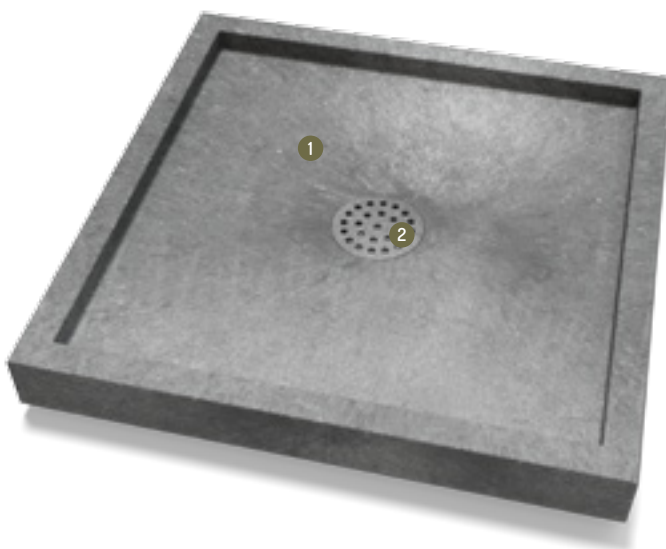

ELEMENTS OF GARDEN BATHTUB MODULAR BOX MADE OF TRAPLAST™

- ① bathtub 700 × 700 × 75 mm, 1 pc
- ② drain gutter, 1 pc
- ③ sealing, 1 pc

BEST PRACTICE OF MOUNTING GARDEN BATHTUB

Garden bathtub made of Traplast™ ① can be placed on the floor or on a garden worktable. The way of draining the water through the drain grid ② can be solved by connecting it to a sewer pipe of an outer diameter of 75 mm using the supplied seal ③. To install the garden bathtub, we need the area of 700 × 700 mm. Place the garden bathtub on dry ground or a sand bed. Think about on how the bathtub is to be placed taking into account the surrounding surface (recessed, facing up or ascending), and

prepare the subbase accordingly. The height of the garden bathtub is 75 mm. In the case of connecting the bathtub to the drainage drain, remove the drain gutter ② from the bathtub ① – see the Figure A. The sealing ③ together with the drain pipe must face up with the bathtub pan after slicing – see the Figure B, so that the drain grid ② can be returned to the pan.

! When working / assembling, use the protective equipment!
